I/O Concepts Delivers New Management Solution that Provides Rapid Return on Investment

I/O Concepts Announces its new Enterprise Management System which helps large organizations lower operating costs and increase efficiency of managing complex, multi-platform computing environments.

Bellevue WA - WORLDWIRE – (August 19, 2005) – I/O Concepts, Inc., a company dedicated to applying innovative software engineering to help organizations reduce operating costs, announces availability of the Enterprise Management System(EMS). This new, flexible, multi-platform management solution allows organizations to improve the efficiency of operations staff and lower the overall cost of managing complex computing environments.

“As we looked out over the enterprise management landscape, we saw a unique opportunity to help customers manage their increasingly complex platform infrastructure,” said Michael Millspaugh, President of I/O Concepts. “After years of working closely with our enterprise customers, with a sharp focus on helping them reduce the costs and complexity of managing their computing environment, we are proud to deliver a valuable solution that is highly flexible, scalable, and easy to use.”

The Enterprise Management System (EMS) is a turnkey solution that supports a wide variety of connectivity types and protocols, allowing it to seamlessly integrate with all major computing platforms and devices. IBM Mainframe, iSeries, Linux, Unix, and Microsoft Windows platforms are supported. In addition, any device that supports SNMP, like routers, ATM’s, and kiosks can be included in the configuration of EMS. Using EMS, customers can manage an entire computing and networking infrastructure from a single console or share that console amongst multiple operators across geographies.

“Our customers told us their management systems were getting too costly and complex with long cycles for implementation and investment return, which simply isn’t good enough in these days of budget constraints,” said Bill Redinger, Vice President of Sales and Marketing at I/O Concepts. “We heard them loud and clear and worked with large organizations to deliver this new solution, and very rapid Return on Investment has been reported which is a testament to the success of our joint efforts.”

In addition to intelligent platform management capabilities, EMS offers organizations added benefits through various security features around terminal access to the managed platforms. It also contains features that assist with Sarbanes-Oxley regulatory compliance by allowing reports to be generated about who accessed a particular system and exactly what they did during that access. Organizations that have tested and deployed EMS discovered the combination of features allows for significant flexibility with a high degree of automation and auditing of problem resolution.

The Enterprise Management System is available now and pricing is dependant on the configuration of the organizations computing environment. For pricing information, please email sales@ioconcepts.com

About I/O Concepts

I/O Concepts, Inc. is an employee-owned corporation located in Bellevue, Washington and has been providing enterprise computing solutions since 1989. It has a rich history of delivering solutions that assist customers with their goals of reducing overall computing and operational costs while enhancing organizational productivity. Their engineers routinely examine complex computing issues and apply creative thinking that yields innovative solutions. Their guiding principles are to create solutions that are easier to use than any alternative, provide extreme flexibility, allow for high scalability, then follow through with responsive and personalized customer support. I/O Concepts’ customers include some of the largest organizations in the world across all vertical industries.
