
I/O Concepts Adds IBM iSeries Support To Popular Enterprise Management System

I/O Concepts Announces IBM iSeries Support to Enterprise Management System which helps large organizations lower operating costs and increase efficiency of managing complex, multi-platform computing environments.

For Immediate Release

BELLEVUE, Wash./EWorldWire/Dec. 19, 2005 --- I/O Concepts, Inc., a company dedicated to applying innovative software engineering to help organizations reduce operating costs, today announced support of IBM iSeries in its Enterprise Management System (EMS). EMS is a flexible, multi-platform management solution that allows organizations to improve the efficiency of operations staff and lower the overall cost of managing complex computing environments.

"This latest announcement of adding iSeries support to our EMS suite keeps us on track in expanding the way we help customers manage their increasingly complex platform infrastructures," said Michael Millspaugh, president of I/O Concepts. "I am extremely pleased that our diligent efforts of working directly with AS/400 and iSeries customers has yielded this outstanding support for IBM iSeries systems."

The EMS is a turnkey solution that supports a wide variety of connectivity types and protocols, allowing it to seamlessly integrate with all major computing platforms and devices. IBM eServer systems including iSeries, pSeries, xSeries and zSeries, and competitive equivalents, running operating systems like MVS, z/OS, z/VM, OS/400, Linux, AIX, Solaris and Microsoft Windows are all supported by EMS.

"Our large customers told us we needed to integrate AS/400 and iSeries support into EMS to help them lower their operating costs and increase operational efficiency," said Bill Redinger, vice president of sales and marketing at I/O Concepts.

iSeries support includes integration with existing EMS facilities and allows Information Technology Managers to monitor and manage a large number of local and remote iSeries systems from a single console, and even share that console amongst multiple operators securely. The iSeries features of EMS can gather, and act upon, a wide variety of system and usage information, including audit trails that can assist with regulatory compliance.

iSeries support in the EMS is available now and pricing is dependant on the configuration of the organizations computing environment.
