I/O Concepts Expands Service Offerings To Better Serve Customers

I/O Concepts has expanded its services to include regulatory compliance and business continuity consultation.

Bellevue WA. – (Sep, 2006) – I/O Concepts, Inc, a company dedicated to applying innovative software engineering to help organizations reduce costs, has expanded its services offerings to include consulting services for regulatory compliance for Sarbanes Oxley (SOX) and the Health Insurance Portability and Accountability Act (HIPAA), COBIT, business continuity and disaster recovery analysis and legacy application modernization (including SOA).

A July survey of 244 Fortune 1000 companies conducted by the Institute of Internal Auditors that found 30% of companies feel their software tools cannot handle the situation, while another 30% have resigned themselves to manual compliance. Regulations are so hard to keep up with that even major companies with seasoned IT groups are losing the struggle to keep their corporate compliance applications up to date, not to mention their people and reporting systems.

“Regulations and business continuity best practices are hard for companies to keep up with” mentioned Michael Millspaugh, President of I/O Concepts. “It’s not a problem we made, but it’s a problem our customers have and they shouldn’t feel as if they’re climbing the regulatory mountain alone.”

“It’s not just an expansion of our services,” says Millspaugh. “It’s the natural evolution of complex regulation. Companies across a range of industries can leverage our deep technical expertise on a short-term basis. We help them get a handle on these issues; then they’re free to get back to business.”

The expanded services are available now and pricing is dependent on the service and project.
